

## Description

---

Given a string, replace each its character by the next one in the English alphabet (z would be replaced by a).

### Example

For `inputString = "crazy"`, the output should be `alphabeticShift(inputString) = "dsbaz"`.

### Hints

- `split()`
- `indexOf()`
- `join()`

### Input/Output

- **[time limit] 4000ms (js)**
- **[input] string `inputString`**

Non-empty string consisting of lowercase English characters.

*Guaranteed constraints:*

$1 \leq \text{inputString.length} \leq 10$ .

- **[output] string**

The result string after replacing all of its characters.
