

Description

You are given a two-digit integer n . Return the sum of its digits.

Example

For $n = 29$, the output should be `addTwoDigits(n) = 11`.

Hint

- `split()`
- `parseInt()`
- `toString()`
- `reduce()`

Input/Output

- **[execution time limit] 4 seconds (js)**
- **[input] integer n**

A positive two-digit integer.

Guaranteed constraints:

$10 \leq n \leq 99$.

- **[output] integer**
The sum of the first and second digits of the input number.
