Description

1. Write a function that returns the sum of two numbers.
2. Write a function that returns the sum of all numbers regardless of # of params.

Example

For param1 = 1 and param2 = 2, the output should be add(param1, param2) = 3.

Hints

- Arithmetic Operators
- Rest Operator
- forEach()

Input/Output

- **[time limit] 4000ms (js)**
- **[input] integer param1**

Guaranteed constraints:

-100 ≤ param1 ≤ 1000.

[input] integer param2

Guaranteed constraints: -100 ≤ param2 ≤ 1000.

[output] integer

The sum of the two inputs.
